

CERTIFICATE OF ANALYSIS

Pure Copper IMN-001

The assigned values¹ and uncertainites² in µg/g

Element	Mass fraction ¹	Uncertainty ²
Ag	27.59	±0.42
As	3.17	±0.20
Bi	1.42	±0.09
Co	2.04	±0.35
Cr	3.55	±0.47
Mn	5.18	±0.38
Ni	3.42	±0.60
Pb	4.28	±0.69
Sb	2.33	±0.29
Se	1.38	±0.23
Sn	3.31	±0.65
Te	1.23	±0.38
Zn	4.57	±0.64
Indicator values		
Cd	0.11	±0.06
Fe ³	13.9	(±2.4)
S ³	6.0	(±2.4)

¹Unweighted mean value of the means of accepted sets of data, each set being obtained in a different laboratory and/or with a different method of determination.

²The certified uncertainty is the expanded uncertainty with a coverage factor k=2, corresponding to a level of confidence of about 95 %.

³Not homogenous in the volume of a single cylinder.

Prof. Zbigniew Śmieszek
Director of the Institute

Certified on October 2012
Revised on December 2014

Means of accepted data sets

(for one method at one laboratory, respectively)

Description of the material:

The reference material is available in a cylindrical form (diameter 3 mm, height 5 mm); in a bottle containing approx. 50 g. The mass of one cylinder is 0,310±0,004 g.

Traceability:

Most of the analytical work performed to asses this material has been carried out by laboratories with proven competence, often indicated by the national authority. This certified reference material is traceable to: IMN CP (CP1-CP6) and CF (CF1-CF5) series and BAM-M381.

Analytical methods applied:

Ag	2	Spark optical emission spectrometry (AES)
	3, 4	Flame atomic absorption spectrometry (FAAS)
	5	Globule arc optical emission spectrometry (DC Arc)
	6, 7	Inductively coupled plasma optical emission spectrometry (ICP)
As	1,3	Inductively coupled plasma optical emission spectrometry (ICP)
	2	Hydride generation inductively coupled plasma optical emission spectrometry (HG ICP)
	4	Inductively coupled plasma mass spectrometry (ICP MS)
	5	Glow discharge mass spectrometry (GD MS)
	6	Electrothermal atomic absorption spectrometry (ET AAS), Fe(OH) ₃ -precipitation
	7	Electrothermal atomic absorption spectrometry (ET AAS), Zr(OH) ₄ -precipitation
	8	Globule arc optical emission spectrometry (DC Arc)
Bi	1,3	Hydride generation inductively coupled plasma optical emission spectrometry (HG ICP)
	2	Spark optical emission spectrometry (AES)
	4	Globule arc optical emission spectrometry (DC Arc)
	5	Inductively coupled plasma optical emission spectrometry (ICP), Zr(OH) ₄ -precipitation
	6	Glow discharge mass spectrometry (GD MS)
	7	Electrothermal atomic absorption spectrometry (ET AAS), Zr(OH) ₄ -precipitation
	8	Electrothermal atomic absorption spectrometry (ET AAS), Fe(OH) ₃ -precipitation
	9	Inductively coupled plasma mass spectrometry (ICP MS)

Cd	1	Electrothermal atomic absorption spectrometry (ET AAS)

	5	Globule arc optical emission spectrometry (DC Arc)
Zn	1, 7	Inductively coupled plasma optical emission spectrometry (ICP)
	2, 3, 6	Flame atomic absorption spectrometry (FAAS),
	4	Flame atomic absorption spectrometry (FAAS), electrolytic Cu-separation
	5	Globule arc optical emission spectrometry (DC Arc)

Participants:

- Institute of Non-Ferrous Metals, Analytical Chemistry Department, Gliwice, Poland
 - Laboratory P-1 (Classical Analysis)
 - Laboratory P-2 (Atomic Absorption Spectrometry)
 - Laboratory P-4 (Optical Emission Spectrometry)
- Centrum Badań Jakości, Poland
 - Laboratory WBJ-1
 - Laboratory WBJ-2
- Sargam Metals Pvt Ltd, India
- Shiva Technologies, USA
- Teledyne Leeman Labs, USA
- Bundesanstalt für Materialforschung und -prüfung (BAM), Germany

Intended use:

- Globule arc optical emission spectrometry
- Inductively coupled plasma optical emission spectrometry (ICP)
- Inductively coupled plasma mass spectrometry (ICP MS).
