Analytical methods applied:

- Co - spectrographic, spectrophotometric, gravimetric
Mn - spectrographic, spectrophotometric, titration
Mg - spectrographic, gravimetric
Cu - spectrographic, spectrophotometric, electrolytic
Fe - spectrographic, spectrophotometric, titration
Si - spectrographic, spectrophotometric, gravimetric

The chemical analysis have been carried out in seven specialistic laboratories from Poland. Homogeneity testing were made taking into account over 25 % of the material produced. Investigation was carried out using spectrographic method with spark excitation. Homogeneity was estimated statistically. The set consists of 5 standard certified reference materials in form of rods 6 mm in diameter and 100 mm long. CRMs are stable in time.
